

Investment Approach:

- Generate consistent Alpha in global equity markets through disciplined use of time-tested econometric models, while holding risk in line with the broad equity market-risk
- Systematically exploit short term irrational market behaviour with long term fundamental rational
- Highly rationalized buy and sell discipline

VECTOR Navigator is a global equity fund that is actively managed with a set of proprietary valuation models. The fund aims to offer superior risk-adjusted returns to global equity investors, both in bear and in bull markets. Our models systematically screen global equity markets in search of undervalued stocks, by continuously assessing 2700 quoted companies, worldwide, in a highly rationalized and automated fashion.

We estimate any stock's attractiveness by using a number of investment criteria or "factors" that have been carefully selected, over many years of research, from a much larger group of candidates, by measuring their predictive power. They are combined in a way that maximizes ex-post risk-adjusted returns.

The fund is managed in reference to an index (see prospectus). While the fund manager tries to maintain a similar level of risk, he has the discretion to actively invest in countries or sectors not included in the benchmark in order to take advantage of specific investment opportunities. Put differently, the fund does not passively track this prospectus benchmark, but makes active investment decisions. The fund is appropriate for growth-oriented investors with an investment horizon of at least six years.
