

Investment Approach:

- Generate consistent Alpha in global equity markets through disciplined use of time-tested econometric models, while holding risk in line with the broad equity market-risk
- Systematically exploit short term irrational market behaviour with long term fundamental rational
- Highly rationalized buy and sell discipline

Trailing Returns (annualized for periods exceeding 1 year)

VECTOR Navigator is a global equity fund that is actively managed with a set of proprietary valuation models. The fund aims to offer superior risk-adjusted returns to global equity investors, both in bear and in bull markets. Our models systematically screen global equity markets in search of undervalued stocks, by continuously assessing 2700 quoted companies, worldwide, in a highly rationalized and automated fashion. The basic idea is to tune in on stocks that score well on growth, risk & valuation properties, compared to their sector and country peers, and to buy and sell them when the time is right (leaning on some well-researched behavioural-finance concepts).

We estimate any stock's attractiveness by using a number of investment criteria or "factors" that have been carefully selected, over many years of research, from a much larger group of candidates, by measuring their predictive power. They are combined in a way that maximizes ex-post risk-adjusted returns over the past 15 years of stock market history, assuming this might give us some edge in predicting how some individual stocks will evolve in the months to come.

Out of our vast universe of 2700 stocks, we then construct a portfolio of around 90 companies, based on their chances of outperforming their peers in the following months, while taking into account their stock-specific risk characteristics. Navigator is managed very actively, while striving to always remain well diversified along multiple sectors, regions and other risk dimensions.
